About us

We were established at year of 2008, in a empty small apartment with 4 or 5 workers. At that year Beijing Held the Summer Olympic Games . Time is fast , 12 years passed , we become one of the leading manufacturer for sublimation bandana . Around 80,000,000 Pcs Bandanas were sold all over the world during last 12 years, and the number is still growing everyday.

Our city

Fuzhou , The Capital of Fujian Province , is very suitable for Living . Fuzhou Economy is belongs to second level in China , so the rythem of daily life not too fast . Life and work could find balance in our City. There are around 8 Million peoples living in Fuzhou , they enjoy over 100 different famous local special food , they breathing best Air in China , owning over 66.8% forest cover rate that is contribute to become No 1 forest rate province during last 50 yeas in China.

What makes BOYI different

We are dedicated to offer better service , better solution , better value to our client.

Honest to client, Loyal to client is the key to commication as well

Solution always was offered at the first time after problem happened. No hide problem , offer solution.

24 hour fast production might be different 5 years ago , but we still pround of being the first offer such fast rushing service.

100% inspection for quality control

Why choose us

See why thousands of organizations rely on us as their bandana printer.

- Full-Color Printed Bandanas
- High Quality At Cheap Prices
- FREE Design Available
- FAST Turn-Around Times
- Printed in the China
- Personalized Assistance
- Variety: We also print Headbands & Arm Sleeves

Our Team

Female is absolutly play most importance role in our company , 95% our production team member are female , 100% our member are local people . Which is simply means DETAIL and Stable . That is why we could work as normal 5 Days after CNY and Production even during city block down due Corona Virus .

Screen Printing

Silk screen printing is a very common method of printing. We use that on flat lanyards. The printing is suitable for simple logo that in 3 colors. One of the things screen printing clients like is the touch of the printing, it feels a little thick layer higher than the printing surface. And the cost of printing is cheaper as well compared to other printing ways.

Digital Printer

We have 15 digital printers, a key factor that we can dispatch goods in 24 hours to our clients. These printers use eco-friendly ink, have great printing heads, and excellent performance on color matching, Level 5 color fastness to ensure colors are perfect and long-lasting even after 60 degrees of water washing.

Sewing

We have 12 sewing machines for sewing lanyards and fleece bandanas. All our workers are local people who contribute to our stable production capacity even during the Chinese New Year holiday. That is why we can still produce when all other factories were blocked down during the COVID-19 pandemic.

Weaving

We started weaving raw material ourselves in 2018. This means we control every step of the process from material to products. This is key for us to offer our clients fast and stable service, and keep our prices low.

Sublimation

Sublimation is a key printing method for our factory. Around 80% of our orders are based on sublimation. You can almost print whatever you want on lanyards and bandanas using sublimation printing. Around 10,000,000 sublimation products were sold worldwide.

POLYESTER Bandana

■ Polyester Tube Bandana

B255

■ Specification:

- *Moisture-wicking/Repelling
- *Protect against the sun, wind, insect&elements
- *Odor control
- *Breathable and light
- *Multifunctional, More than 12 ways to wear(click here to check the video)
- *Can use for fishing, skiing, motorcycle, riding and any Outdoor activity you like.
- *Quick drying
- *100% seamless
- *High-tech Polyester Microfiber material
- *One size fits most.
- *Hand or machine wash, line dry.

■ Packing

- *25cm *50cm(9.85 inch*19.69 inch).
- *34g/pc
- *55*34*28cm, G.W.18KGS
- *1pc/opp, 500pcs/ctn

Polyester Fabric

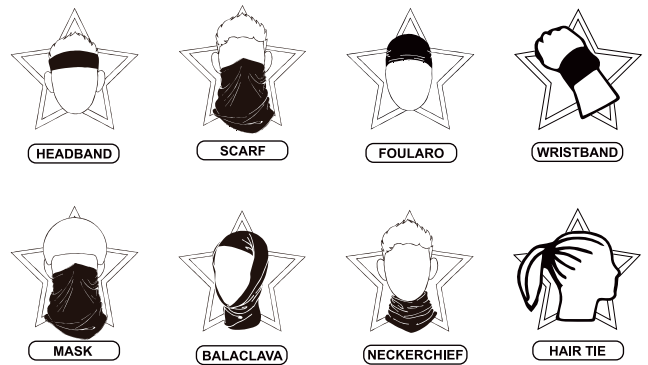

RPET fabric is a new type of environmental protection fabric made of recycled Baote bottle yarn. Its low carbon source creates a new concept in the field of regeneration.

Heat Transfer Printing

thermal-transfer printing and thermal-wax transfer, uses heat to transfer an image from wax to an object. Thermal-based printing methods work with pre-printed images on a single wax sheet or produce printed-on-the-fly images made by layering wax dye onto an object. Heat-transfer printing can replace or supplement alternative printing methods.

The Original multifunctional seamless wear

RPET Fabric

LYCRA Sandard Tube Bandana

Lykra Standard Tube Bandana

B255-LS

Specification:

- *Good recovery after stretching
- *UPF 50+, strong UV resistance
- *Moisture-wicking/never fading
- *Protect against the sun, wind, insect&elements
- *Odor control
- *Breathable and comfortable
- *Multifunctional, More than 12 ways to wear(click here to check the video)
- *Can use for fishing, skiing, motorycle, riding or any Other Outdoor activity you like.

- *34g/pc&36g/pc
- *55*34*28cm, G.W.18KGS/G.W.19KGS
- *1pc/opp, 500pcs/ctn

Coolmax Fabric

The four pipe fiber can quickly guide sweat and moisture away from the skin surface and disperse in all directions, making sweat volatilize faster and keep the skin dry and comfortable at all times. So the body perspires, the skin surface and clothing do not leave sweat. Long lasting, comfortable and breathable, warm in winter and cool in summer, feeling more relaxed.

Heat Transfer Printing

thermal-transfer printing and thermal-wax transfer, uses heat to transfer an image from wax to an object. Thermal-based printing methods work with pre-printed images on a single wax sheet or produce printed-on-the-fly images made by layering wax dye onto an object. Heat-transfer printing can replace or supplement alternative printing methods.

- *1pc/opp, 250pcs/ctn

Fleece Fabric

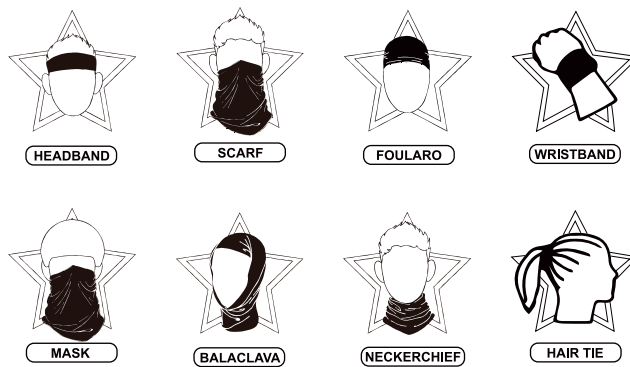

The shaker is fluffy and dense, and it is not easy to shed ZD and pilling. On the reverse side, the fleece is sparse and symmetrical, the nap is short, the texture is clear, and the fluffy elasticity is very good. Add antistatic additives, flame retardant additives, infrared additives and so on. The fleece can also be combined with all fabrics for better cold resistance.

Heat Transfer Printing

thermal-transfer printing and thermal-wax transfer, uses heat to transfer an image from wax to an object. Thermal-based printing methods work with pre-printed images on a single wax sheet or produce printed-on-the-fly images made by layering wax dye onto an object. Heat-transfer printing can replace or supplement alternative printing methods.

Merino Wool

Merino wool is also known as ultra-fine Merino wool, because its fiber is extremely fine, with a diameter of less than 19.5 microns, and the best Merino wool with a diameter of less than 11.7 microns, is the finest of the wool varieties. And PU Merino sheep sweater Wool is much coarser. The sweater made of this kind of wool is not only elastic, but also soft and delicate. It is very comfortable to wear close to the body. However, the coarser wool clothes will itch after wearing. The fabric woven by it is delicate, soft, considerate and comfortable. It not only has excellent heat preservation and moisture absorption function, but also has moderate expansion and contraction tension. The products made of ultra-fine Merino wool can more reflect the noble temperament. In addition, most Merino wool products are specially preshrunk and can be machine washed directly. After machine washing, the natural characteristics and advantages of wool will not be affected. Proper care can keep the good appearance of the clothes. Its noble price and feel, next only to cashmere, doomed its products to be the best of all wool products. The price is about 60% of cashmere products.
